

Front end development: ES6

Objects - Star - Arithmetic Sequence

The following exercise contains the following subjects:

- Javascript

Question

Write a function called `createSequence`, that will create **arithmetic sequence** (read about it online!) objects. this function receives 1 parameter `d` - the difference between the elements.

It returns an object with 2 properties:

1. `d` - the arithmetic sequence difference.
2. `printElements` - a function that will print the requested number of elements of the arithmetic sequence. The function will take 1 parameter, the number of elements to print.

* To simplify things, all the arithmetic sequences will start at 0.

- print 10 elements of the arithmetic sequence with the difference of 2
- print 6 elements of the arithmetic sequence with the difference of 5

Your output should be:

0,2,4,6,8,10,12,14,16,18

0,5,10,15,20,25
