

# Website building: styling

## Styling - Star- Positioning

---

The following exercise contains the following subjects:

- HTML
- CSS

### Question

We took the box from the previous ex

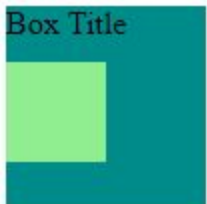

and added a title to the big box.

the html looks like this:

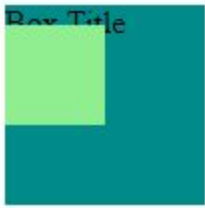

```
<body>
  <div id="outer">
    Box Title
    <div id="inner"></div>
  </div>
</body>
```

and we want the small box to be positioned 10px underneath it.

Like this:

But what we get is this:

The small box is covering the title.

Fix this using the positions we've learned.

Note: the box will keep it's 10px gap even if we change the font size:
